

A4 size laser security papers

Papier securise.com / Sécuridoc, the European leader for laser and inkjet security paper products for office use, offers its expertise to public administrations and companies in order to guarantee the integrity of their proof documents.

All our paper follows three essential rules:

- **Protection against counterfeiting**
 - By making the “container” -the paper support delivered to our clients- non-replicable.
- **Protection against falsification**
 - By preventing any subsequent change to the generated contents.
- **Maximum simplification of document-checking procedures.**
 - Without any specific training or sophisticated equipment.

To achieve this, we use tried and tested security features in the field of document security, often by adapting them to office constraints, and sometimes by developing our own patented solutions.

For maximum effectiveness, especially in the area of counterfeiting, some of the security features are invisible and embedded during the paper manufacturing process; others are integrated at printing stage.

Thus, depending on the importance of the document, its possible use and the physical aspect one wishes to achieve, one can add, suppress or hide some of the functionalities and security features, achieve a physical aspect nearly identical to a classic letterhead, while retaining a very high level of protection.

The majority of our production is made on our own security paper: Vauban or Sécuri-Acte, and we make especially sure that our fibres come from sustainably-managed forests, resulting in guaranteed PEFC- and FSC-certified products.

Similarly, since our factory holds the Imprim'Vert Eco label, the same environmental friendliness is brought to printed security features, in particular through the use of vegetable-based inks. Our products also comply with the main applicable ISO standards.
